Our customer service team will review your report and will be in touch. LOADING Telling time has never been so fun! This online interactive clock merges both analog and digital versions of clocks so that students can practice telling time with each. Both a fun teaching and learning tool, students and teachers can adjust the controls based on the knowledge and skill level of students. Using the online teaching clock is simple. Simply drag the hour and minute hands around the clock to adjust the time. When teaching, turn the hour and minute hands on or off to simplify the clock for early learners. The controls are on the top right and left-hand corners. Conveniently, the clock features minute markers around the outside, helping young students learn to read the analog. Dash line circles, which can be toggled on or off in the lower left-hand corner, help students see which minute or hour the hands are pointing to. Turn the digital clock on or off using the button on the bottom right-hand corner. You can also choose between the 12-hour and 24-hour clock using the buttons in the bottom right-hand corner. Finally, add some color and interest to your clock by choosing from the colors on the bottom left-hand side. The interactive online clock is a versatile classroom tool. Ask students to show a time on the clock and see if they can do it! Or, challenge students to remember what time school ends and have them show that time on the clock. Students can check their own work by toggling the digital display on. You might also display the online clock in your classroom so that students can compare times to your regular classroom clock. For example, you could display the time when you're scheduled to go to gym class on the interactive clock. That way, students can see how much class time is left. Meanwhile, they'll practice their time-telling skills! Visit classplayground.com for more resources and printables related to time. The clock for learning time has movable hands. It has three main modes, the first demonstrates how to tell the time using an analogue clock. The second mode uses the clock hands as a way of learning angles. The third mode uses the clock as a way to help understand fractions. The clock can be altered to change colors and its overall styling. Note in this activity different controls are shown depending on the current mode. Common Controls The controls above the mode selector are always displayed. At the top you will see a digital clock, below are three buttons. Click the 12 button to display in normal 12 hour format with AM/PM. Click 24 button to change to the 24 hour format. Often you won't want to display the time at all, click off and the digital clock will disappear. The clock can be used to display the current time (based on the clock of the computer you are using). Click the real time to toggle this feature. This is useful as children can observe how the clock changes throughout the day. For random time problems click the random button and the clock hands will spin to produce a random time. So this is great for lots of quick fire questions. When the clock is not showing the actual real time, then small handles appear at the end of the hands, these are dragged into position. Time mode controls. First select time mode, below are a set of controls. These can be used in time problems or to view how much time has elapsed when showing the actual real time. The first one displays the hours passed. The second one the minutes that have passed. Underneath reset button sets both back to zero. So a brief example of how to use them would be click random time. Now ask what the class what time will be in say 1 hour and 25 minutes. To demonstrate this click reset, so both minutes and hours are zero. Now drag the clock hand forward until the hours is 1 and the minutes is 25. The clock now displays the answer to the initial problem. Angles mode Clocks have always been a useful way to teach about angles. This clock has angle measurements built in. First set the mode to angles, to get the control set. In angles mode you will now see a protractor button click it to toggle the display of the protractor. Next is the auto toggle button, click to turn it on and you will notice the protractor lines up automatically to measure the angle. Move the clock hands and the protractor will follow. Below the protractor button is a slider use this to change the size of the protractor. When measuring angles the large clock hands can be made thin for better accuracy by clicking this. To display the angle click Ang, and click Arc to display the angle arc. When dragging the minute hand it currently snaps to the nearest minute, turn this feature off by clicking snap. Finally the type of angle can be changed using the select control. So you can choose the angle between the hour hand and minute hand, both clockwise and anti-clockwise. Or measure the angle of the second hand from 12 o'clock. This works very well with the realtime setting as children can see a full angle of 360° turned every minute. This helps learning of key angles such as 0°, 90°, 270° etc. Also conversions such as 30 secs * 6 = 180° Fractions mode Select fraction on the mode control to use the clock to teach fractions. Time statements such as 'a quarter past', 'half past' and 'a quarter to' obviously are linked to fraction. In the fraction mode a circle sector is painted from 12 o'clock to the minute hand position. Two large fractions are displayed the fraction of an hour shows the unsimplified fraction of minutes/60. The simplified fraction is the same fraction cancelled down when possible. The simple button toggles removal of the hour and second hands to give a simplified view. You can also click thin to toggle the thinner clock hands. The clock is divided according to the divider lines control. The default setting is auto, this divides the clock according to the fraction displayed. Essentially the clock is divided depending on the simplified fraction. However you can turn off auto mode and divide the clock according to the number selected. Percentages can also be shown by clicking to toggle the percentage display. Styling the Clock Select the style mode to access controls. So for example to change the colour of the numbers, click numbers followed by a colour from the colourpicker. To remove the numbers completely click 'X' in the colour picker. You can do this with other parts of the clock too, which obviously can make reading the clock more difficult. Related activities Further lessons on the telling the time involve comparison of two different times the two clocks activity is excellent in this regard and can also generate time questions. To expand on the angles try Basic angles which can be used to examine types of angles such as acute, obtuse and reflex. It can also be used to create many different types of random angle problems. Having seen a circular fraction in this activity, the interactive fraction wall can also be used for further teaching of fractions. Clock with moving hands isolated on a white background.
